

500kHz, 4.5A Step-Up Current Mode PWM Converter

General Description

The EMH7080 is a current mode boost DC-DC converter. Its PWM circuitry with built-in 80mΩ power MOSFET make this regulator highly power efficient. The internal compensation network also minimizes as much as 6 external component counts. The non-inverting input of error amplifier connects to a 0.6V precision reference voltage and internal soft-start function can reduce the inrush current.

The EMH7080 is available in E-SOP-8L package and provides space-saving PCB for the application fields.
